Empathy Map Canvas:

An empathy map is a simple visual tool that helps our team understand the needs, thoughts, feelings, and challenges of the people who will use our flood prediction system. For the **Rising Waters** project, the empathy map focuses on disaster management authorities, meteorologists, and people living in flood-prone areas. It helps us understand their goals, concerns, and the difficulties they face during flood situations. By understanding the users' perspective, our team can design a solution that provides accurate flood predictions, early warnings, and an easy-to-use web application. This approach ensures the system is practical, reliable, and supports better decision-making during emergencies.

Creating the empathy map helped our team identify user needs, improve the system design, and develop a solution that enhances disaster preparedness and public safety.
