

Project Design Phase-II Data Flow Diagram & User Stories

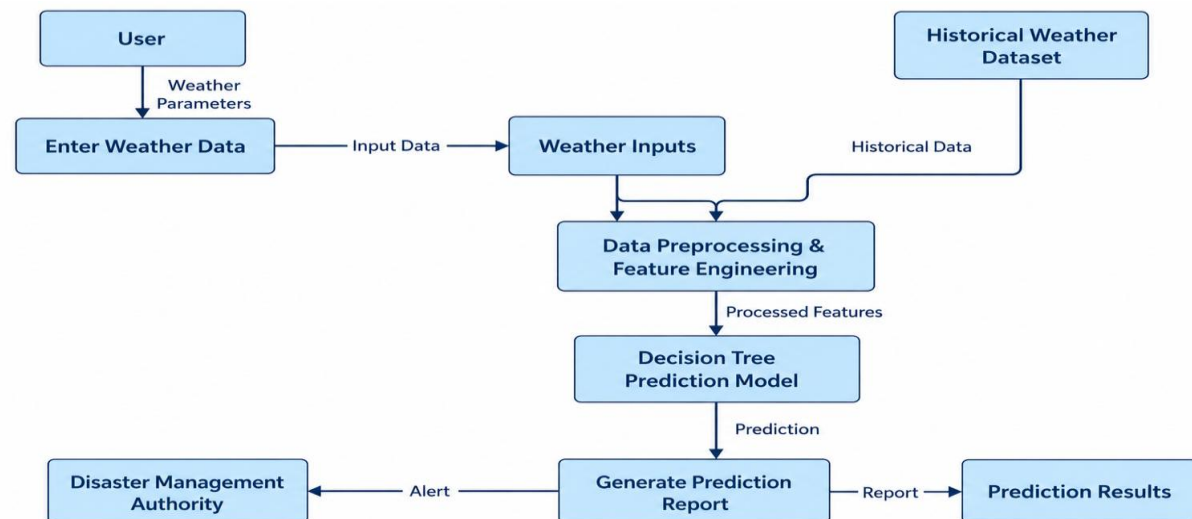

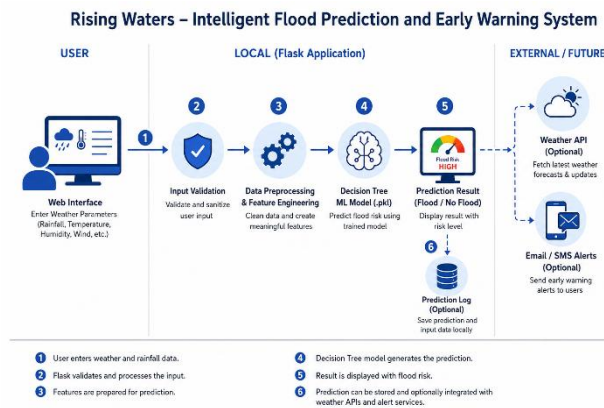

Date	2 July 2026
Team ID	
Project Name	Rising Waters
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Example:

Example: DFD Level 0 (Industry Standard)

User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Web User)	Home Page	USN-1	As a user, I can view the project home page and understand the purpose of the application.	Home page loads successfully with project details.	High	Sprint-1
Customer (Web User)	Prediction	USN-2	As a user, I can enter weather and rainfall details to predict flood risk.	User can submit all required input fields successfully.	High	Sprint-1
Customer (Web User)	Prediction Result	USN-3	As a user, I can view whether there is a Flood or No Flood prediction.	Prediction result is displayed correctly.	High	Sprint-1
Customer (Web User)	Prediction History (Optional)	USN-4	As a user, I can view my previous predictions.	Prediction history is displayed if available.	Medium	Sprint-2
Customer (Web User)	Error Handling	USN-5	As a user, I receive an error message if I enter invalid or incomplete data.	Appropriate validation messages are displayed.	High	Sprint-1
Disaster Management Officer	Early Warning	USN-6	As a disaster management officer, I can use the system to identify flood-prone situations.	Accurate flood prediction is generated from entered data.	High	Sprint-1
Disaster Management Officer	Resource Planning	USN-7	As an officer, I can use prediction results to plan rescue operations and resource allocation.	Flood prediction result is available for decision-making.	High	Sprint-2

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Meteorologist	Weather Data Analysis	USN-8	As a meteorologist, I can enter weather parameters and analyze flood risk.	Weather data is accepted and processed correctly.	High	Sprint-1
Administrator	Model Management	USN-9	As an administrator, I can update or replace the trained Decision Tree model.	New model can be loaded successfully without affecting the application.	Medium	Sprint-2
Administrator	Dataset Management	USN-10	As an administrator, I can manage the historical weather dataset used for training.	Dataset can be updated and maintained.	Medium	Sprint-2
Administrator	Application Monitoring	USN-11	As an administrator, I can monitor application status and prediction logs.	Application runs correctly and logs are available.	Low	Sprint-3
