

Project Demo Planning

Date	03 July 2026
Team ID	
Project Name	Rising Waters
Maximum Marks	1 Mark

Project Demo Planning:

his demo presents the **Rising Waters – Intelligent Flood Prediction and Early Warning System**. The demonstration covers the project problem, solution architecture, machine learning model, web application, and flood prediction results. Since you completed the project individually, all sections are presented by you.

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Introduction	Introduce the project, objectives, and problem statement	2	Self
2	Solution Overview	Explain system architecture, dataset, and Decision Tree model	3	Self
3	Live Application Demo	Demonstrate weather data input and flood prediction	4	Self
4	Prediction Results	Show Flood / No Flood prediction and explain the output	2	Self
5	Technology Stack	Explain Flask, Python, Scikit-learn, HTML, CSS, and Bootstrap	2	Self
6	Conclusion & Future Scope	Summarize the project and discuss future enhancements	2	Self

Demo Flow Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Explain the need for early flood prediction and disaster preparedness.
2	Solution Overview	Describe the architecture, dataset, and Decision Tree Machine Learning model.
3	Live Feature Demonstration	Enter sample weather values, generate a prediction, and display the result in the Flask application.
4	Q&A Session	Answer questions about the implementation, accuracy, technologies used, and future improvements.
